

HYDROSTATIC TEST MANIFOLDS

Our A-Frame manifolds are available with a combination of ports for connecting your equipment during a pressure test. For example; connect a test pump, standard test gauge, PRV and the test piece simultaneously whilst being fed from flexible hoses. The manifolds are manufactured from HP stainless steel and pressure ranges are from 0-10,000psi or 0-22,500psi. The HP 22,500psi A-Frame comes complete with a built in thermowell.

Types of manifolds available –

- 10,000psi Block and Bleed
- 10,000psi A-Frame
- 22,500psi A-Frame
- Bespoke to customer requirements.
